

Patient monitors UM 300-S MOUNTS FOR EACH CASE AND CLINICIANS COMFORTABLE WORK

Solutions that support patients
and assist clinicians

Wide range of mounts

Place your monitor any way you need for comfortable work

Every detail of the **UM 300-S Patient Monitors** is functional, technological, and ergonomic. We offer a wide mounts range for each clinical case: on the patient's bed, medical rail, wall, or mobile cart. It's all for comfortable work with the equipment to meet your needs.

Mount on the patient's bed

There is a special hook for the patient's bed on the back panel of the UM 300-10-S patient monitor: it is easy to hang or remove, especially given its light weight.

System for ambulance

The ultra-slim patient monitor is mounted on the ambulance console using a dedicated mounting system.

The mount ensures secure fixation during transport and allows for quick removal when necessary.

Wall-mounted swivel arm with basket

Enhanced option of adjustable wall-mounted arm with convenient basket for accessories and consumables. For mounting the UM 300-S patient monitor on the wall, when it is necessary to organize working space in a ergonomic way.

Brackets for mounting on a vertical rack or medical rail

With UM 300-S patient monitors UTAS optionally provides special mounting for a vertical rack or medical rail. The bracket is firmly fastened to the VESA plate on the rare side of the monitor, so the device can be securely installed in the necessary position.

Mobile trolley with basket

Suitable for UM 300-S installation close to the patient's bed and a quick move between units and rooms. The trolley is equipped with a basket for accessories. Wheels with the brakes conveniently lock the monitor in the necessary position.

Mount for additional display

Due to compact bracket you can install additional 22" HD display on the same cart with patient monitor. With UniScreen™ technology the second screen does not duplicate information but helps you visualize parameters in the most convenient way.

Service and support

Be attentive to the state of equipment is important as caring for patients.

We provide a full range of services to maintain superlative state of medical equipment, including remote consultation, diagnostics and software updates for monitors.

To find solutions for even the most difficult situations, we collaborate with leading clinical centers in 30 countries.
